ive been gettin into site design a lil bit..

and just wanted to ask a few questions ive been having..
with out having to search hours of google..
and not totaly get my questions answered anyways lol

on my server i have 2 files..

gdform.php
gdform.asp

whats are these?

im at the point where im tryin to learn how to get information back and forth..
like.. if you fill in your name address.. user name and pass.. and hit submit

what do i need to do this?

through the tut's ive been watchin they say i need a "CGI Script"

but is that what PHP and ASP will do for me as well?

perl/cgi scripts.. php/asp.. like wtf is the diffrence?

im just wanna know what i need to learn
more then the other so im not wasting my time..

im goin to be doing a site for a backwoods car dealership with 300 to 500 some pages..
and i kinda need to know before i get too deep into it

using adobe golive cs to build the sites...

I have been learning HTML for the past month. Go to www.20fr.com they have all the stuuf you
need. Host with them they kick butt. They have tutorials on makingorder forms, visitor trackers,
all that. They even have a web design program. I did my website all by myself though not with
any help from 20.fr except with the forms...

Check out my site. You will get the idea.

www.RenGen.20fr.com

lol i already have a server and a domain

i know how to make forms..

i just wanted to know what most ppl use now and whats easier to code

deadfiveI did my website all by myself though

No, you didn't. You used a free web layout template made by somebody else.

deadfive

Check out my site. You will get the idea.

www.RenGen.20fr.com

I wouldn't be too proud of that site mate.
It really is, to put it in the nicest way I can, bollocks.

oh and...

here critize my site lol

WoodrowGraphics

this is what ive been using to learn and test stuff..

but what do i need to do to have a page where you can type in information..
hit submit and ill get the information..

what is used to do that??

not bad for a first webby...tho the logos and nav buttons are a bit big. but you kept it simple,
without un-nessicary graphics

ya i started doing it before i came across the concept of diferent resolutions lol

i run 1600by1200

the target area of ppl i plan on using this site for is kinda an older age as well as less computer
literit.. so i tried to make it as DUH simple as i could

and ignore the 2 dead links i have.. i know there dead

I like that site GeTSm0keD!
One suggestion!
Change the font from Times New Roman to something like Verdana or Arial!

WNxCABALI like that site GeTSm0keD!
One suggestion!
Change the font from Times New Roman to something like Verdana or Arial!

hmm could do.. i didnt realy got into what i wanted the fonts to look like..

once i found out adobe golive doesnt make cgi scripts for you..
(or till i knew what one was)
thats kinda where i got stuck..

i hate this website coding BS lol

why cant there be a program that does it all for me! grr

There is
Dreamweaver MX

so your tellin me dreamweaver does cgi scripting code and all that for you?!

i do have all the macromedia apps.. just havent got into them yet..

like if i have a contact form.. type your name and address..
it will create all the BS i need?!

when they hit submit.. it will send me a lil thing sayin what they typed? dreamweaver will do that??

Posted by GetSm0keD on Sat, 19 Mar 2005 23:46:20 GMT

ya thats what i mean.. i use Adobe Golive to make the sites..

 click

just cause i know how to use damn near all of the creative suite and video collection

theres only 3 main programs that i know that make sites with out having to know HOW to write any coding..
golive
dreamweaver
microsoft frontpage (like wtf is gonna use a MS program)

im just not gettin how people set up things like... user submited things..
even Deadfive gets what i dont hahah click

CrimsonPHP = free... I recommend that.
I concur.

It's powerful, but easy to learn. You can do simple things with it to start off with, but it is always capable of much, much more.
