I compiled a list of some block bypass sites that you can feel free to use.

Simply type in the url including http:// of the site that is blocked and it will show the results.

http://www.ibypass.com
http://www.ibypass.net
http://www.ibypass.org
http://www.ibypass.malea.net
http://www.futracom.com/djm
http://www.ka0z.net/djm
http://www.arcadegamez.org/DJM
http://www.arcadegamez.net/DJM
http://www.xenonhost.com/~lbrant/ibp
http://www.crunge.org/poxy/
http://proxify.com/
https://proxify.com/

If anybody knows of any more please let me know. My school are blocking websites and bypasses like crazy at the moment and I'm determined to beat them.

You too huh?

(DJM, the last 4 links don't seem to work.)

They aren't blocking any sites on my school... Instead they watch random people's screen... If they see you are doing something you should not... Ouch... Beter get ready for some extra

lessons.

Sometimes they even put someones screen on a big screen... I think they call it a smart board, not sure though. So everyone sees it... Lol.

The xenonhost one works :s

The tripod one didn't so I took it down and I have the wrong links for the arcadegamerz I'll fix that in a sec.

[EDIT] Fixed.

could be useful, thx

my college blocks almost any site just for the reason 'you visited it' :rolleyes:

I feel so lucky... now

I'm high school we had 'Bess'   an annoying bitch (literally, Bess is a company with a female dog as a mascot) that blocked EVERYTHING not related strictly to education. E-mails, games, even JOKES

Now, in college, the only thing the computer geeks are determined to keep us all out of is MSN messenger, E-Messenger, etc. I don't mind though.

OpalkillaMy school's blocker is so retarded.

So is mine, it only blocks the main domain like "Http://www.renforums.com" not "Http://www.renforums.com/index.php" and so on.

Luckily I'm a student. They don't want to spend time to secure the internet since we have to much ICT students like me who need the freedom for our study, and are able to hack our way out of it anyway. Some security problems were quit funny.

After a coffee machine crashed, we plugged the thing back in so we could use it in. While rebooting the system we found out the IP adres of the machines system that was needed for our schools digitsal payment system. So we of cource tried to start a tellnet session with the machine,

and to our suprise we actually got acces to some program on the machine using tellnet.

We couldn't really find out how the program worked, it had some problems. And it seemed to crash after we played with some contrast settings, but it was funny none the less.

what if they have disabled registry modification too?

also what is that little tidbit of javascript in your avatar for?

This is mainly a bunch of random crap that works at my school, not sure about the rest of you. My school blocks most stuff, not sure about those proxy's though, can't test it now. But, we can send a site review request, and add in a little coment, so what I did last week was write 1 paragraph in the little comment thing about how the RenegadeForums are an excellent educational discussion board for technology and software . . . blah blah blah. . . And Today, guess what, it wasn't blocked LOL. They didn't even check the site they just read the description. Sometimes I wonder how stupid the people running the school security is, people don't have to enter a password for their student computer account. (I changed someone's password since they didn't have one) There's also no limit on how much our student folders can hold on the network drive out school has. So I am going to fill up the last 15 gigabytes of it so that no one can save anything, with someone elses account. My friends and I like to cause trouble, never get caught. . .

Here's something funny you can do, if you can get to the command prompt read A, otherwise read B
A Open the command prompt. start > run > cmd. or C:\WINDOWS\system32, then find the command prompt in there. type in net send * message, replace message with whatever you want the message to be. That will send the message in a little pop-up (pops up above anything and everything) to all of the computers currently logged in on your school's network. It says which computer it came from though, so, not to good of an idea unless you stop in an empty classroom real quick and do it. There's also a way to do it anonymously, I haven't done it yet, but here's

some reading about it. . . http://www.codeproject.com/internet/anetsend.asp

B. Two ways that I know to get to the command prompt. . .
1. Last year this worked at my school, open IE then go to file > open > browse set it to show all files, go to C:\WINDOWS\system32 then open the command prompt, now read part A.

2. Well, now they've fixed that, we all have our own student computer logins which load their permissions from the school's main server, our permissions block the command prompt. . . . What would happen if the computer could not load the permissions? That's right, ful access. . . unplug the network cable from the computer and logon. Now plug it back in, and you you have internet again. And access to all programs and everything. Open teh command prompt then read part A.

What i usaly do is.
Create a shortcut, properties CMD > enter.

Your own CMD.
We got just normal rights, but if u know the right commands in cmd you can basicly do anything.

They kinda secured it here aswell. We got a limited space on the serverdisk.
Wich is 10 Megabytes for Word files Ecta.
But there's also drive wich has all Network programs on it. Created a map by tweaking a bit. I got Red Alert in it. And now everyone is playing Red Alert via the shortcut on school .

For myself i got a way into C:Documents, and i placed there various emulators,roms. I even Tried installling the Renegade demo. But the Win installer wont alow me to. And even if i would i wouldnt be able to play online cuz of the proxy.

Anyways, they run win 2000 on the school does anyone know.
How to get on everyone's names via X:/netuse in the dos command?

Im lucky now. Once your in year 10 at my school, you get unlimited access. A few peeps have
gone to see porn and that shit. Before that, I used to get blocked, I couldnt visit theses forums
without a prxy. Bloody websense.

If your school even has a crappy security system or tech loosers i wouldn't suggest the netsend. In the last 2 weeks alone i've had 2 freinds get suspeneded for month for that crap One sent out "All ur base r belong to us" or w/e it is. That was funnier than hell tho, everyone in history was like W-T-F and i knew exactly what it was so i just took a SS .

My school has interegated me "Can you do this if we do this?" "Cna you get this password if you have this this and this" blah blah blah.

The sad thing about my school? I'm the second suspect if anything goes wrong with the computers. Most people at my school are people who are anything but computer intelligent, and they probably couldn't navigate to "program files" for their lives

Our school system is genius in ways.

They have blocked pretty much everything you can think of, Run, CMD, Hard Drive, Most of the internet, Command Prompt, Reg Edit, Installshield, the file menu in IE and folders.

The only dumbass thing is they can't figure out how to stop explorer opening a new window for every new folder you click.

This is on windows 2000 btw.

All we've got a is a proxy that restricts what sites we go to. But that can be by-passed very easily.

We've got a program that blocks sites at my school, too. Very annoying when you've finished work and have nothing to do   Maybe this proxy will be useful, although they get REALLY REALLY PISSED OFF at anyone who tries anything remotely computer-literate. Some kid got suspended for using a goddamn netsend command
