This hapens to every comp, doesnt matter what spec's.  
But it hapens sometimes more then normal.

EXdeath7Are you running windows XP with service pack 2?

Yea, I run Windows XP pro w/SP1 and 'sometimes' this happens

WNxCABALEXdeath7Are you running windows XP with service pack 2?

Yea, I run Windows XP pro w/SP1 and 'sometimes' this happens]

This kinda is a SP2 issue on some systems.

Especially with the quit Button that it "freezes" @ the exit on Renegade.

But Renegade will always keeps crashing from time to time unless they fix it.

Other then that the best way, to get the most less crashes is run it on low detail. 640x XXX 16 bit everything low. Thats how i got my longest uptime in Renegade.

On my pc renegade freezes at random times.

Sometimes on quitting. Other times while playing. It freezes for a few seconds and keeps going fine after that. Or it freezes again resulting in a crash to a grey desktop or disconnect.

This only happens on my new pc that is using SP2. :bomb: :stern:

What would BHS need to fix this kind of problems?

The source code ?

We already did...we added an exit console command. Hit F8 and type exit, and it will close smoothly.

Then the server says you were kicked by RenGuard for "RenGuard not running anymore." It gives the same message when it finds bad files too, so that doesn't exactly look too good...

BlazerWe already did...we added an exit console command. Hit F8 and type exit, and it will close smoothly.

Mine seems to be missing. I reinstalled everything a while ago, and this command isn't available.

The freeze happens to me sometimes, but usually I can press Win + M and wait until the desktop shows and then I can close it from there from the Task Manager.

BlazerWe already did...we added an exit console command. Hit F8 and type exit, and it will close smoothly.

Was this part of CP1?
