Hey, I haven't before been looking into SP2 & Renegade in the past until now. I lent my copy of Renegade to somebody at work, he runs Windows XP Pro SP2. He installed the game without problems, but when he goes to launch the game, he is instantly greeted with the "Send Error Report" Window and closes Renegade. He has tried, updating to 1.037, compatibility mode, downloading the latest windows updates and still the same re-occurring error.

Any advice on a fix?

Or does SP2 just naff up Renegade completely?

DJMSP2 naffs everything up completely, I had to format my Hard Drive twice because of that hunk o' junk.

---

Try thinking about other people than yourself. There are people like me who have zero problems with SP2, meaning SP2 doesn't "naff" off everything.

Me too, luckily 99.8% (approximation ) of everything important and irreplaceable via CD was and is on my 160GB HDD.

SP2 has created problems for some people but the majority have no problems only problem SP2 cuased me was a crash when renegade closed so i ahve to use the new f8 and quit command

has he tried using the compatabilty mode at all?

i do not know of any fixes but its worth a try

Workarounds:

Before closing Renegade, alt-tab and bring up the RenGuard window and click "quit". Both RenGuard and Renegade die.

Before leaving the server, press F8 and type "exit" or "quit" (I forget which)... it will terminate Renegade.

icedog90WNxCABALHe has tried, updating to 1.037, compatability mode,

never saw that

oh well.. guess your friend has to format and not install SP2 but then his open to a huge variety of problems

WNxCABAL

He has tried, updating to 1.037, compatability mode, downloading the latest windows updates and still the same re-occurring error.

I will just tell him that a re-install could resolve things.

Andy.

P.S. Do you think Graphics drivers may need updating?

its always good to have updated gfx drivers

only prob SP2 gave me was the quiting thing..  
it always froze Ren when i quit..

im not runing SP2 as of now tho

My renegade runs fine, I have had sp2 for a while now and Havant seen any problems. I did install mine off of a microsoft cd I ordered, but that cannot be any different then the download version.

Was it an old windows install you upgraded, or was it relatively new?

SP2 came...SP2 went. That's all I've got to say about SP2. Except that I was much happier after it went.

SP2 fucked up my install. Apparently it works for some and screws with many.
