Hello, i get this error:

linux:/renegade/Server # ./renegade_server
Renegade Free Dedicated Server v1.037 GU-838 03/01/2003 - 19:00:34
Console mode active
nic-enum gethostbyname() error - looking up hostname linux
nic-enum gethostbyname() error is HOST NOT FOUND

I cant run the server, why?

Whats your hostname? It needs to be able to resolve it.

What if you can't resolve it? Is there anyway of forcing the LFDS to look for a different hostname
or IP for the machine its running on?

How can you change your hostname under Red Hat 9?

This post is from 2005. Nice TWO year bump.
P.S. I don't know enough about Linux to help you. In the future you should probably make your
own topic...

Why open another thread when the current thread is the exact same problem I'm currently experiencing??

I had the same problem some weeks ago. It occurred because the DNS client was not set up correctly.

What does the console output if you type "host google.com"?
