I have tried a number of things to resolve this error even re-installing Renegade, RenGuard and Windows, but keep getting the same thing.

[22] Trying to connect to server #1...Connected

[22] Secure link established.

after a clean install it will log me on all the way but after that I just get the "secure link established" message and then a blank screen for Renguard.

If I click on the Renegade button, Renegade starts ok but servers that require Renguard does not detect my Renguard.

Anyone else having this problem or have a solution.
