Hmm, without the code you are quite helpless, you need to find someone willing to give a license key.

I made a WOL Shared components installer. Wonder if I still have it around somewhere.

i am guessing that the registry settings for the ren WOL components and the TS ones are the same...if so you could just have someone send u the files from their WOL components folder...not sure tho...

-MP-reconi wouldnt stopped laughed when he fooked up his wol forever by banned his IP of EA

self lol
for me is that the same like walking without a dick
Well, you can definitely tell you're a member of MP.

Hey, pal, I think you can poke around the CD and find it. I'm not completely sure, but take a looksee.

Wait wait...Don't send anything... You can get your CD key from your registry if you have it installed already.

Go to HKEY_Local_Machine>Software>Westwood>Renegade There should be a value there that says it is your serial. Copy that and save it.

Then download this:

** now why would you paste a link to a keygen? -Crimson **

And create a serial... then reinstall the Westwood internet stuff... Then go back to that registry value and restore it to what it was.

That *should* work. There should be a better way though.
