I get this error message when trying to connect to the server I made.

[21:19] Connecting to 12.214.84.222:8766

[21:19] No reply from server

Maybe the server is offline

or maybe teamspeak is not running on it

It is online so what is the problem and how do I fix it? I tried Teamspeaks help and it sucked.

If you're using a router you might need to forward ports.

also the standard port for TS2 is 8767, so if you didn't change it you're connecting to the wrong port.

So what port should I be connecting to then? If not the standard then where do I find the new port number?

no, the standard port for TS2 is 8767, but your using 8766 which could be blocked by a firewall or router.

Any other UDP port will do.

I've tried this as well, and did the port forwarding, etc., but I guess my computer doesn't like to connect to itself.
