I have my ts server up and running. When it shows up in the list its ip is 63. somethin somethin.
But when I connect to my ip then I get on the server. I cant connect through the list because of the
63.somthin ip. How do I change the ip on the server list? And it wont even let my freind connect
to my ip.

help.

Ok now, I got all that working but now here is this question.

Where can I post my ts server on the web so that it shows up in the ts list?
My ts server works and all but how do I get it in the list?

Ok it shows up in the list but it has the wrong ip in the list. I can connect via quick connect using
the ip from "my ip's" in the system tray but not throught the weblist. How do I change the ip?
