Everytime i try to launch renguard it comes up like it normally does but the window is blank and the mouse is "thinking", when i try to close it it says "End none responsive program Renguard?" (plus some other stuff) and i say end now and it closes. What is wrong?

Oh and i tried Reinstalling renguard and that didn't work.

What is going on? thnx to any1 who can help me...

Don't make another post with the exact same thing. Just bump the other one. As for your problem, no one must have a solution for you right now.
