Subject: Teamspeak

Here is the problem with my server:

I can join the server I made. Other people cannot connect to my server. I know it has something to do with ports. The port is set to 8767 on the server. What do I need to do to allow other people to join. And please actually TELL me what I need to do.

Go into your router config and forward that port to your TS Server's internal ip of your home network. Probably something down the lines of 192.169.1.100, good luck

cmatt42Creed3020Go into your router config and forward that port to your TS Server's internal ip of your home network. Probably something down the lines of 192.169.1.100, good luck

192.168.1.100

I meant that...lol

I use 169, I always forgot what the real world default is...lol
