I started playing renegade again and all these new things have come out. Ok so I installed renguard and let it install the latest core patch. When I start renguard everything works fine but when I tell it to start renegade it says 'Failed to start renegade'. I have renegade and the renguard installed in a custom directory.

Anyone got some tips/hints?

Tnx in advance

I really want this problem fixed cuz I'm playing without renguard now:S

Does this directory have any spaces in them? That's a known bug in 1.03 that it doesn't allow spaces in the directory name..

Yes it does, c:\Documents and settings\[user]\Games\CnC Renegade. But the folder Program Files also has spaces, doesn't it?

Folder changed to CnC_Renegade, problem not yet fixed

The whole path may not have any spaces

ie, move it to c:\games\renegade or so
