I have a problem. I install Renguard, but if ill run it the pre-install check start, it shows a problem and I download "always" and "script" because new maps. Now it works, renguard download and start install Core Patch but then I get this message;
Old File does not exist
Note the error you are getting as well as what file is being patched and contact Black Handstudios at www.blackhand-studios.org for assistence.
I pressed OK and then it shows a new message:
Core Patch 1 Download Complete

Now I try 2 run renguard and the same happens again.
Please answer in easy english because my english is not good enough and i speak german

Thanks

To play rengaurd without the Core Patch:

Run the Rengaurd program, click on the button Options. Then click on the box next to the text: ''Disable Core Updates''. Quit Rengaurd, then Restart Rengaurd and press on the button Renegade to play.

By the way, did you patch Renegade to the 1.37 version?

Yes, as mentioned above, the old file not found occurs if you did not update renegade to version 1.037.

go here and download the patch for your language
ftp://ftp.westwood.com/pub/renegade/updates/

(you must uninstall renegade first, then install, download and install patch and then install RG)
