Ok, someone keeps asking me which port WOL uses to query an FDS server, so I was wondering if anyone here knows?

I'd have to check that using TCPView...

Well the port is set to 4848 (for game clients), and the Rcon is 4949

but what we need is the query port (like the gsa query port) that wol uses, which I assume is built into the fds program.

if anyone can find it I would be grateful..

UPDATE: Ok, I downloaded the TCPView program and found out it seems to use TCP 2671 for anyone else who might want to know.
