BRenBot 1.43 is mostly compatable with APB servers, and I am adding extra support for APB to several of its functions if I happen to be working on them.

So is tsugaming.com (account suspended, nightma's and flood3d's community), both have been down for days now and have rented out their a00 hostnames too...I don't think we'll be seeing them anytime soon lol

This might not be related to what you're talking about but I noticed sometimes when you visit the westwood FTP you are directed to some other FTP with useless EA stuff on it.

PS. Check my sig.

Yeah... that does look to be what I was thinking of.
The FTP is usually located at ftp.westwood.com/pub looking at where you are makes me think
you were redirected to different FTP because there is no "westwood" directory on the regular FTP.
