Thats better. Youre still not getting that topic back, by the way.
Go to http://www.Freewebs.com or http://www.Geocities.com if you want an easy to learn site builder. Theyre both free, however you can pay to get more features. You can also head over to http://www.dot.tk and check there. I think thats the site, anyway.

The only other way to get a free site, other than the three i gave you, is to Google it. Search for "Free Websites."

If it's for a clan, then talk to the guy who owns www.clan-site.net.

If you want a domain, try www.tk.com, and you can get a .tk domain, though you'll have to put up

with their popups. It takes money to get what you want in the real world, and don't bitch about the prices of domains. They're $9/year, and I own 12 of them.

GUN-WARRIORGET READY TO LOSE YOUR HEAD IN MY RAMJET RAMPAGE
Im sorry, but that is the STUPIDEST thing ever. Im not gonna drop it, so dont tell me to. The Ramjet is the WORST weapon to use online ever.

[/offtopic]

You can disable them quite easily actually.

After activating your website, just go in "MyDotTK" and look around, you'll likely find an option to do so within' two minutes or less.

I can't really give you any in depth details about it (screenshots and such) because right now I'm unable to add a new domain to my account.

.TK
Put this between the <HEAD> and </HEAD> tags on your first page to remove the annoying popup.
We have two ways of doing this, the first one makes your real url visible to visitors:

```
<!-- ############# Begin Num 1 ############# -->
<Script>
  if (window.top != window.self) { window.top.location=window.self }
</script>
<!-- ############# End Num 1 ############# -->
```

The second lets you control the popup window:

```
<!-- ############# Begin Num 2 ############# -->
<Script>
  subwin =
window.open("http://YourHost.com/YourAccount/PopupPage","subwindow","height=100,width=486");
</Script>
<!-- ############# End Num 2 ############# -->
```

This is a bit random, but im bored.
