Do you got an error while booting up WInXP? Or just while starting leveledit dev?

I am awaiting a request from another user, if he replies I host leveledit dev and it can be downloaded then.

I cant even work out what your asking

Do you get a problem booting WinXp because of level edit dev edition, or is it unrelated? Or is the problem with loading level edit dev edition?

And if you actually want help with this I suggest telling us what the error IS ???
