I'm trying to change my profile on these forums and it won't let me change it. Keeps saying 'You need to enter your current password to enter.' The thing is that I've entered my password numerous times and it still gives me that "error." Could someone please help me?

When it says "You need to enter your current password," it's not telling you to log back in. It's saying you need to enter your password on that page. Specifically, you need to type it up where it says "Your Password:" under "Login:", which is just under "All fields are required. Please note that passwords are case sensitive.", which is under "Required Information" at the top of the User CP -> Settings page.

Also, your signature is needlessly enormous. Might I suggest something around the size of 468 x 60?

Excuse me, but I couldn't make it much smaller. Get a bigger screen resolution.

I have 1280x1024 and it's huge still. Also, my monitor can't go any bigger.

I've got it on the one below that one, the 1100 something one, and it's not that big.

1024 x 768 is my current resolution. I could go bigger, but I fail to see the point in doing so without turning on "Display Large Fonts" toggle. . .which would, of course, defeat the purpose entirely!

You must have a tiny screen then. That, or bad eyes.

No, seriously. What's the point of going further past that screen resolution? Also, I have a ViewSonic E70-10 monitor. It's pretty big for an old-style "rounded screen" monitor. . .not the biggest, of course, but big nonetheless.

No, Joseph is right; that signature is WAY too big. Fix it now!

More desktop real-estate. More code to view. Sharper images.

If it's any smaller than 19", then it's too small for 1280x1024. If it's any smaller than 21", then it's too small for 1600x1200.

Mine's 17" and I like my 1280x1024. If it's not on 1280x1024, it looks too blurry. It anti-aliases.

It was created to solve result of having blocky text due to the screen (& resolution) being so small that there wasn't much room for non-blocky text. Eugh.

Please don't criticize him, Joe....He's the one who made my signature!

Hmm... Well, how about this: I don't care, I like making signatures. And I used MS Paint.

How about a 19in (14in viewable) running 1024x768? =D

If your viewable area is 14", then your screen is 14". None of that bullshit of rounding up what you can't use.
