Hello All!. I asked a question here awhile ago about that script that prevents your server from shutting down when theres not 1 Nod and 1 gdi but they said its not publicly available.

I know nothing about programming scripts unfortunately.

I would really appreciate it is somone could give me a copy of those scripts. I could trade an FDS serial for one but i doubt anyone with this script would need one though.

Thanks for any help

Wow!

It makes me feel really good that you have a active 2 thought mind careful though as reading this may make you permanatly damaged!....Also it is good to know you have an ounce of logic somewhere in that pea brain of yours

He asked a valid question, I too would be interested in the answer.

There is a script that does that, Adad runs A 6 player server that he uses that script on. I think thats the only place i've seen it.

It would really help me because I often while i'm hosting switch people to Neutral and Unteamed so my games end up shutting down alot unless i have alot of players, and these are somthing like RPG server side maps i'm running.
