Lets put it this way, Renegade freezez 10 seconds from when I join, when renegade freezez, the whole computer freezez. So umm, what did I do, I recently upgraded from a FX 5500 256mb OC Pci to a Nvidia 6200 128mb PCI. Now it just freezez my computer in renegade after 10 of me joining. Any help?

Make sure you are using the correct drivers. Perhaps that will solve those pesky "freezez".

You must uninstall the old drivers, reboot, then install the new drivers. You can't just install the new drivers and expect it to work.
