My server is currently on gsa. How do I switch it over too xwis? The server isn't actually at my house, but I do have FTP access to all the config files.

Sorry, you cant.

You need to have access to C:\System32\drivers\etc\hosts

Does you hoster have Remote Desktop access? if so ask him to run the program and it will patch the needed files, other then that i dont think you can untill xwis makes the change itself. (WOL - XWIS) then you can host it by changing the setting in server.ini
