hiya,

i jus had to do a complete system refresh and when i installed renguard and ran it, it asks if it wants to automatically apply updates an i checked yes...

however nuttin happened im pretty sure its sposed to start downloadin CP1 straight away, but instead it does nothing at all, nor any other times that i run renguard...

any1 have any advice or any ides where i can download it myself and install it manually?

Go to "options" in the RenGuard menu and enable the option: "Disable Core Patches".

Now manually download the CP1:

http://download.renguard.com/standalone_cp1.zip
