I have tried to install earlier renguard versions before they never worked for me so now since all the servers people are playing in need renguard I decided I'd try again. Everytime renguard opens it says, "Failed to receive a list of available master servers". When I try to run "game2.exe" and I try to play ren it says, "requesting server list". I have gotten that message before and it just went away but I just installed renguard so that leads me to believe it was caused by renguard.

Now I can't re-install it because I can't find my cd case or the manual. Thanks to renguard I'm officially quitting ren.
