Hi,

just tried reinstalling Renegade on my comp last night, and everything worked fine until it said updates available. I downloaded the 18.7 MB update, restarted the game, tried to get on the server, but that same message with the update kept on coming. I can't get passed that point.

Any ideas anybody? Tried it on two different computers with the same result.

Please help

thanks

Manually install the update. Said update can be downloaded from this FTP site or this website.

More information in the fresh installation of Renegade(and sequentially Core Patch 1) can be found here.
