Ok so ive had my number of problems (all of which were minor)
But this one is start to make me consider stop using RG (which i wouldnt really want to do)

Im playing in my server and ill say 10 or so minutes into the game renegade freezes for a quick second and closes and when i check the RG thing i see...

[19:12] Trying to connect to server #1...Connected

[19:12] Secure link established.

[19:12] Welcome to RenGuard , HRDave!

[19:12] To launch Renegade, please click 'Renegade'.

Which i see nothing wrong.so other players are also getting this. ive checked the RG on server and it was working correctly i even reinstalled everything....anyone know whats wrong???

How does Renegade freezing and exiting prove that it's a problem related to RenGuard?

I've had it happen to me too, and I've never thought of it as being related to RenGuard.

WEll considering these factors...

When im kicked it says "no longer using RG"

Second only RG users are being kicked

third sometimes it will kick me and say on that message that i was booted from RG

Hmm nothing in that paste represents a RG problem, thats the standard message displayed

anytime you connect to RG. It possible that either RG or Renegade randomly crashed for some reason (I get the quit to desktop bug all the time).

We are soon to release a new version of RG, so please bear with us as something much better is coming

But the thing is when i uninstalled RG the problem was gone Then i reinstalled renegade and renguard and deleted the WW folder and i still got it...

But yeah i cant wait for the new RG
