Out of the ashes arises a new program. One that will succeed and control the Renegade community (*Hopes*).

NoFear (NF) Regulator is a server moderation tool that will have commands amost like brenbot but some are slightly different while other new commands will exist. The program needs .Net 2.0

To give you a taster of my development, here are some screenshots.

Will it have real SSC RG support ?

Looks nice

It looks pretty good, I hope to see a public (beta) version of it soon.

It will have full RenGuard SSC Support (Binding to server).

The IRC module is complete, a few bugs to fix and I am currently working on the FDS log.

Crimson wrote on Thu, 02 February 2006 16:01It looks like BR.NET.

Though it's nothing like BR .NET. There will always be simulatities between bots though.

I wasn't insulting it... it's just that Dante used the exact same window dimension proportions and a similar visual layout for the app overall, that's all.

Skinning isn't much point when all that happens is it get shoved on the fds machine and left, unless you can provide an good agruement I won't be.

with RavBot (doesn't look great, but probably makes the bot run faster)
