I keep getting this and it doesn't matter where i try to install NR.

The first time it installed was the only time it worked but it failed to install because my AV had a problem with a file it was trying to write.

I thought maybe it threw unwanted files into the Registry but even if it did i have no clue where in the registry it would be.

Thanks for any help.

when you extract the original .zip file

you are trying to install to the same directory u extracted those to

try installed to C:\Westwood\NightRegulator\ WITHOUT moving the NightRegulator installer

and see if it makes a difference

Bah i got it to work by installing .20 rather than 21 but I think it updated itself anyway.

I have had 21 running and it updated itself to 22 (which was NOT downloadable at this moment as a stand-alone) and all is running fine.

ssaow 1.41 + NR 0.22 = Purrfect
