This is not a new problem, but I'm asking for help for it now.

My internet connection is a 128 up and 128 down <----- (problem?).

I do remember one time when I was able to play on a server like n00bstories without warping all the time. But what I want to know is, is there any way to fix the lag I am experiencing? (w/o getting better internet I don't have a job and my parents won't pay for better internet)

Do you have your bandwidth detection on auto? Try manually changing your sbbo setting (press F8, and type "sbbo 128000" while ingame).

Also keep to 'small' servers. You won't be able to take 40-50 players servers. 20 -26 should be your limit.
