Hi guyz.. hope you wil try to reply..

I've played renegade since the moment that it was avabile in stores here. but now.. (around 4 years later) my father bought a new computer.. and he want to play renegade too.. but everytimes there's something witch doesn't function right.. and i'm getting realy sick of it. some details:

[Computer Configuration:]

[Pentium 4 3600 (with a P5P800S series socket)]  
[1 gig MBram 400Mhz]  
[MSI graphics card NX6600Pro(nVidia chipset & drivers)]  
[Onboard: Sound, network, etc...]  
[Asus Bios]  
[HL-DT-ST DVDROM GSA-4167B Double layer DVD writer]  
[Case with front screen (time, 3 temps, power info etc)]  
[Logitech LX700 desktop]  
[connected to wan with a sweex annex-a router/modem/switch]

[Software Configuration:]

[Battlefield 2]  
[Command & Conquer Renegade]  
[Gamespy Arcade]  
[Northon Internet Security 2004]  
[Macromedia flash 8 player]  
[nVidia Drivers (forceware 81.95)]  
[DirectX 9.0c]  
[Renguard]  
[Soundmax (audio drivers)]  
[VideoLAN VLC Media player 0.8.4a]  
[Westwood Shared Internet Components]  
[Windows XP Pro]  
[Windows SP2 (fully updated)]

[Renegade Configuration:]

[-Video]  
[Driver: nVidia GeForce 6600]

[Resolution: 1024x768]  
[Color Depth: 32bit]  
[(fullscreenmode)]

[-Audio]  
[Driver: Aureal A3D Interactive (tm)(selected)]  
[Creative Labs EAX (tm)]  
[Creative Labs EAX 2 (tm)]  
[DirectSound3D Hardware Support]  
[Miles Fast 2D Positional Audio]  
[Volume: (dont think that makes any difference)]  
[Quality 16bit]  
[Playback Rate: 44kHz]  
[Speaker Setup: 2 Speaker]  
[(stereo mode)]

[Performance (Expert mode enabled):]

[all bars at Highest]  
[Lighting Mode: Multi-Texture Lightmaps]  
[Texture Filter: Trilinear]  
[(Terrain Casts Shadows enabled)]  
[Btw.. same as autoconfig at this computer]

The error:

Renegade works with almost any forceware version i have tested on this computer (tested forcewareversions from 7x.xx to 81.99) but when i start playing a movie (.mov .mpeg etc) the computer suddenly freezes.. and only the reset button at the front pannel of the computer workes.. with forcewareversion 81.95 workes the viewung of movies fine.. and i can LOAD almost any game without trouble.. but when i start playing for like.. 10 to 20 minutes.. renegade in my case suddenly quits to desktop saying something like "in rengarde a error occuried the program will now be terminated." (got dutch version of windows so i don't realy know the exact words) some more error details below:

(dutch:

Vastgelopen toepassing: game2.exe, versie: 1.37.0.1, vastgelopen module: , versie: 0.0.0.0, vastgelopen op: 0x00000000.

(english translation:

Error occuried in: game2.exe, version 1.37.0.1,  
Error occuried in module: , version 0.0.0.0, Error occuried at: 0x00000000.

some more information (the lower section of the computer manager logs:

0050: 0d 0a ..

(Application Failure game2.exe 1.37.0.1 in game2.exe 1.37.0.1 at offset 00150280..)

hmm i hope i didn't made it to hard for you to see the problem.. i'm kinda stranded with options.. (reinstalled windows for over 10 times.. tested multiple nVidia drivers.. etc. etc.!)

hoping you can help me..

Greetz Alcoholicleaf (son of Woodengunner :P:))

Did you try using the no cd crack? [www.thekoss2.org/uploads](http://www.thekoss2.org/uploads) <- find it here

Ren needs to search the videos on the cd. It doesn't with the no cd crack.

There's also a no-cd crack included in CP2.

hmm no i didn't try using a no-cd crack.. i've bought the game like 4 or 5 years ago.. and it worked fine.. 2 years ago i've made myself a img. file of the data disk.. so i didn't have to use the cd everytime.. because i heard the renegade cd isn't really capable with heating and stuff.. and it spins too fast in dvd drives or fast cd drives.. haven't had this problem before anyway..

Is there somewhere to download CP2 manually.. because RG ejects connection when i try download the CP2 patch. (i know.. wrong forum.. but what ever)... btw.. my "everesthome 5.1" \*(also known as a newer version of aida32)\* sais that AGP isn't enabled.. someone knows how to fix this to?

hope you can help me.. and thnx anyway Goztow

(btw.. i got low fps playing 1024x768 with a nVidia 6600 is this common.. or just some weird error/bug/driver issue?)

In the core patch forum there's a sticky explaining how to manually download cp2.

Renegade doesn't like new video cards... But try  
OR updating drivers  
OR downgrading drivers if you already updated them

and I posted a link to the no-cd crack above.

k but still i have had over 20 different nVidia drivers tested.. and all seemed to have some bugs with the configuration.. or displaying movies didn't work (i mean real movies.. not renegade ingame movies) or games won't work right.. sooo... but ill try what you already said.. and i'll keep you updated about this.. maybe i will find a solution by myself

jonwil will know more on this problem I hope. What happens if you start up game2.exe directly without using game.exe? I presume you have RenGuard installed.
