I can't believe u actually put that, don't know any "net lingo" I take it
<http://www.mirc.com>
use that for connecting/finding out what irc is

The admin list depends on the mode you have set on yourself by the IRC. Mode +q/a/o/s? (Half-Mod one)/v

I think it's more basic than that, I think he is asking how to set up a bot.

To be honest yoyaz, if you have no clue where to start, you probably shouldn't, but ill start you off. You need the Renegade FDS (Free Dedicated Server) and a bot of your choosing. (You will need a bot thats not hard to set up, probably BRenBot)

yoyas, you cant run the FDS from the computer you play on (especially if you have a crap computer) it will lag the hell up. NR doesnt require you to connect it yo IRC, that mode is just for moderating it and seeing everything that goes on in the game w/o actually being in the game.

considering you dont know shite about irc, dont use it. all you need to do is connect NR to the FDS by clicking the respective button in the GUI, simple as that.

if you want mod stat in your server, click the moderation tab and add your username (you online name that you will be connecting to the server with) and make a password for it. when you join the server, it will page you with info for logging in.
