Hello, I am new to the renegade community (only about 70 hrs)
and renguard keeps crashing. Specifically, every time i try to gen into renegade i come up with a blank white screen, reinstalling renguard fixes it, but this makes the 4th time I have had to reinstall it. I believe it could be a issue with internet, i am not always connected to the internet, and when i am wireless sometimes has trouble connecting, or modem fouls up, and i get te same white screen, sometimes computer restart fixes it, sometimes it doesn't.
i don't have screen-shot but i will be sure to get one next time it happens.
PS... what i believe would fix it is having renguard load entirely before pinging the network, and giving you the choice to start renegade without renguard i it cant connect

You can already run Renegade without RenGuard by using game2.exe.

Sure,
i am running windows xp sp2 on a amd sempron 3100+ with 1 gig ram, 128mb nvidia agp 8 video, a 160 gig sata hard drive, and... thats pretty much it.

i cant give you a ss of crash, because i cant install it and it doesnt show anything funny until it just disappears, from the running processes list too.
I am resorting to a full reinstall of windows to fix it.
hopefully it will work
