Im not going to go into detail on how and why i got to were i am so ill just give you the facts so you can help i you know how.

I have renegade on my computer and working, it is not in the registry which means i cant play online since xwis gets your serial from the registry and gamespy detects if you have the game in the registry aswel. If anyone can tell me how to edit the registry and insert my serial i would appreciate it very much.

1.
START>Run then type "regedit"
 2.
Go to HKEY_LOCAL_MACHINE then SOFTWARE then WESTWOOD then highligh Renegade
 3.
 1. Right click "Serial" then click Modify and enter the serial without spaces or dashes; just one big long number
 2. If the Serial line in the registry is not there, click Edit, then New, then string value and name the string Serial.

FIXED IT!!

I got the renegade alternate install and just ran the registry editor from it.
