Umm, some people might think this is an easy problem, but I'm completely computer illiterate. When Renegade starts renguard starts up, then a message pops up that says buffer overload. If it's an easy problem, keep in mind that I'm stupid, but I would really like to know how to fix it. thx!

Do you run Windows 2000 or or 64-bit Windows? If yes, Renguard doesn't support them.
