if einstein went back and took out hitler, how come he didnt go back and stop stalin then?

Maybe he could only go once because of the machines stability?

Maybe when he travelled back and got rid of Hitler, the events changed so that the ideas of time travel he had never actually came to be in that reality. I suggest reading up on many of the theories proposed by Einstein. Many are very interesting, although some are complex, but who cares? It is all absolutely jolly good fun!

Um... that would create a Paradox retard... lol if time travel never came to be a possibility Einstein would have never gone back to kill him thus a paradox... [December 16, 2002, 16:40: Message edited by: Godhates]

anyone see the Time Machine... technically Einstein could NOT have killed Hitler when he went back in time, as the reason he built it was Hitler, therefore, if Hitler never rose to power, then he would not have went back for that sole purpose... as mentioned above, a paradox, BUT he could have went back, just not been able to kill him...just my two cents...

Bill and Ted's Excellent Adventure was the only movie I have seen that actually kept true to what time travel would really do. Everything that you have done in the time machine has already happened meaning, if you were to go back and kill someone they wouldn't even be alive in the first place.Just my 2 cents...

I find it funny that they chose Einstein to "travel back in time", since his own theory of relativity states that it is not possible to go back in time...

Which means since he originally made it for the U.S. government, that means he could do anything but go back in time and try to stop himself from working for them... Or do anything which would affect that outcome.

[View Forum Message](#) <> [Reply to Message](#)

no, because in the time machine, the reason he built it was to go back and save his girlfreind.dur! ACK is right, he was working on the machine just because, not because of hitler. no paradox there.and it is true, einstein himself said going back in time was impossible.dont forget, the chronoshpere still existed after he altered history, and then in YR he made a new more stable time machine."he got tired" is tupid. he could always have someone else do it if he could not.it is possible that no matter what, war would happen. but without hitler and stalin,it would have continued to build up, and would have been much more devestating to the world. maybe the ra einstein saw this.

WAIT! there is one thing. Regardless of what it says in RA2, how do we know from information in Red Alert that it was Einstein who went back in time, I mean that guy doesn't even look like the Einstien who appears in the Allied breifings.

ACTUALLY... Einstein never said it wasnt possible his theory did... although time travel to the past is not yet possible in our present technology we can actually send someone to the future of course we would never know if it works lol and plus the supplies needed etc. BUT its still possible... for more information on this just read these books: Time Travel in Einsteins Universe by J. Richard Gott and The Universe In a Nutshell by Stephen Hawking Im probly going to study Quantum Mechanics in college (if they accept me LOL)And btw if you make a time machine just to go see something(not a person tho) its ok but you cant kill anyone actually u could but it would have to be at random and not meditated or u would make a paradox lol so time travel is very unstable even if u just wanted to look at something... nope, wrong. We can indeed send someone into the future, but we cannot bring them back. because all forward time travel is, is moving so fast that time around you actually slows down. in fact you could actually look behind you and see a sort of "chrono shadow".this is actually light bouncing off of you so slowly that when you move away from your position that the light has yet to move away from where you were. seeing as how you are moving faster than the speed of light.

and of course, if it were possible to go back in time, there would of course be the "Langolier" problem

[View Forum Message](#) <> [Reply to Message](#)

well, new technology is made everyday, new discoveries prove old proven theories wrong. I believe that if time travel is discovered in the future that they would have the sense to keep a low profile and try to alter history as little as possible. but then there is the heisenberg uncertainty theory which states (i believe) that you cannot observe without altering. sorry for the spelling errors, I don't type these words everyday.

All this time travelling stuff is mind boggling.

Subject: OT: Einstein.

Posted by [Anonymous](#) on Tue, 17 Dec 2002 20:59:00 GMT

[View Forum Message](#) <> [Reply to Message](#)

Time travel is impossible since time is not a place, but a simple illusion of our senses, a state of mind. However, if you know about the Multiverse theory, travelling through parallel dimensions can be made with the right machines...

[View Forum Message](#) <> [Reply to Message](#)

you probably could try to time travel back, but a pile of mush or a fried corpse is the likely output of this attempt.

[View Forum Message](#) <> [Reply to Message](#)

uh deaf you said exactly what I said lol... I said we could send someone into the future but we wouldnt know if it works cuz he couldnt tell us if hes stuck in the future and btw another theory exists that says that only when the technology exists that you can only travel back and forth when the time travel device existed (and its not possible to move faster than light yet) weve only been able to exceleerate a partical at roughly 99.996 \% of the speed of light the idea of Quantum Tunnling suggests that we may be able to move faster than light but the tests they've done by racing light and using some type of glass only gave it a .00023 fraction of a second win

[View Forum Message](#) <> [Reply to Message](#)

no, speed does not effect time, only the object that travels at that speed.

Subject: OT: Einstein.

Posted by [Anonymous](#) on Tue, 17 Dec 2002 22:10:00 GMT

[View Forum Message](#) <> [Reply to Message](#)

actually speed does effect time take the Twin paradox 1 twin gets on a ship that flys on a rocket and the other stays on earth well its possible that if you go fast enough time slows down and then the twin returns but he is younger than his other twin which stayed on earth oh nevermind I read your post wrong yes it does only effect the objects "time" not the WHOLE of time (btw this is the kind of stuff I study thats why I know so much Deaf... lol thanks for that uh somewhat compliment)
