Features:

Allows you to change your serial number without reinstalling Renegade.

Should the InstallPath in the registry be missing, it will prompt for the directory to Renegade, and store the new value.

If woldata.key is missing, it will create a new one, and use that to encrypt the serial number.

Has a basic serial validation function, so invalid serials cannot be entered.

Allows First Decade users to re-enter their serial, and generate a properly encrypted key (for use on XWIS)

What it doesn't do:

Bypass RenGuard bans

Generate serial numbers

Just a utility to fix bad serial installs / change serials which won't work on XWIS (their database doesn't contain all valid serials, but they can't fix that - it's EA's database). It's been tested on several machines and operating systems, including Linux (using Wine).

If anybody is active on the XWIS forum, view my second of 3 topics, quote Olaf saying "How will having a new serial help if you can't reinstall?" and link him to this.

So what happens if someone, using that program, gets my serial and starts using it? If he/she gets that serial banned, I'll be banned with it. And I did not pay \$50 (Plus a couple years' inflation) just to lose my gaming privileges.

This app does NOT give out serials. It is NOT a keygen. It only works with YOUR OWN valid serial.

All I am looking for in a key logger of sorts for renegade. I have lost my cd key info, but have a real genuine installed on my other pc. My new pc has a nice 19" LCD screen and I would like to install the game on this one, I have all of the original disks including the game commandche 4 that I got with the game as a free bonus.

can someone help

Just need an app that will pull the existing serial used for a legit game install. A friend suggested a key seeker or key changer. I did use a key changer once and it found a key for another game I had but I then got rid of it not knowing I would need it again. Do you think I can remeber how or where I found it !!!!! nope.

This is putting me to tears. I've uninstalled Renguard deciding that I'm not gonna fuck with that. I've reinstalled Renegade several times and used your tool and everything. It still says that my serial number is invalid. It'll make me cry if I can't play Renegade online anymore, it's one of my favorite things to do. Can someone please, please help me?

I know this is a bump.

I have good reason to beleive this version of the tool does not handle TFD's superscript (TM) marks. I suggest a small update.

Did it ever worked? I had a faint memory that it did once, but why wouldn't it now if it did then? Did it work for v00d00 in the first place if he released it? Idk, all I do know, is that if someone could fix it em and release a working version to do the same thing, it would be quite popular and useful.

The reason that it fails so badly for TFD is that the TFD installer doesn't properly set the westwood install path. Using the latest renguard installer fixes taht though (it retrieves the path from a TFD specific correct registry key and fixes the install path).

Um, I seem to have found a newer version. It claims to be v1.1, and v00d00 says that the first did not work, so Im assuming he means this one. TFD recently screwed up my ren install, could someone test this out?

for the stupidest reason in history.....some stupid mod CPC@IRC or some shit
the reason i was banned is i didn't post some screen shots of some mod with a sniper or some
shit
but yah this was 5 months ago and im still banned so i was wondering if you could fix this
somehow?

Because you need to run renegade and login without Reguard first so Reguard can pick up a nick.

This serial changer doesn't work for 4.0. One of the st0rm admins made his own that works properly with 4.0. But the link for that is broken atm, I'll attach it to these forums when I can find it again.
