NOTHING OF MINE WORKS AAABLLOOOO. Ok, I make the script\_zone\_all thingy, then i attach the script TDA\_teleport\_zone to it. I put object\_id and put the id of the daves arrow. I test it when I make a game and nothing happens! I did exactly what the tutorial said to do on renhelp, and yes the id of the daves arrow is right-100012! HELP

Why don't you use Location rather than ID.

Something must be wrong with my game/level edit, because I did exactly what you did, and nothing happens when I walk in the script zone.

Use TDA\_Teleport\_Zone.

It happened once to me. I just walked a few times into the zone and somehow it worked after a few tries. Or you could try generating sectors though I don't know how that will help.

sounds like your scripts.dll isnt in the renegade directory...if set up right, it should work.

maybe you have your zone to big...make a skinny zone ,longer then a character though.
