Hello, I could not find a forum for questions, I posted it on this forum, the closest one I can find was this one, the discussion forum. Anyway I found out that parachutes are in the game and are for use for players like me and you, if you know the code, command, or anything related to the parachute, please post it on this forum.

Thanks, My Name On Renegade is: thrash300

P.S. If it is required to download something to use the parachute, please give me a link

--Thanks

Parachutes are a server side mod I believe? I will move this thread to the mod forum where hopefully someone can give a better answer.

to the best of my knowledge parachutes are not player usable objects, but something that some modders have been trying to implement on bots spawning from a transport chopper.

but I could be wrong, maybe someone did make a parachute script for players and I missed it...

Join one of the BC servers and you can use parachutes, although I don't think that they will release how they did it, so its not much help.

BTW, in the BC servers just get in an orca or transport and type !p to parachute. There are other ways, but I just can't remember them right now.

Actually, right now, in BC only the transport chopper lets you parachute from it, even though it's possible to do so from the orca/apache (it's just disabled). If you're a passenger, type !p in teamchat and you'll paradrop out 1 second afterward. If you're the pilot, type !p and all your passengers (but not you) will be force paradropped. Also, if your trans goes <= 20something before it dies, it'll auto eject everyone, including the pilot. While parachuting, you can shoot and be shot at, so be aware.

I remembered the day they were first implemented, I messaged everyone on MSN and got everyone ingame and we ran around and did all kinds of funny stuff with the parachutes. But I remember parachuting out of the orcas and apaches, do you know why they disabled this?

Hey! I didn't know Parachutes could work with the w3d engine. I'm going to go there man!
