I made a co-op m00\_tutorial for my server but it keeps crashing everytime the level loads on the server. I made sure that ssaow isnt running. I delted all spawn points expect for nod and then gdi bots. Anything special needed for a co op? Anyone know what I'm doing wrong?

Try remaking you're map. And watch what you put in it. Some things crash you're game or server. And it can also be an issue if your map was not saved properly or your Mix file is corrupted.

Make sure all your spawners work right. Some spawners can cause maps to crash serverside.

Kamuix I sent you the file to your email. Now this is kinda frustrating cause i decided to start a M08 so i really didnt do anything to it except delete some bots and then when i tried to run it on my server it loaded but then when you go into it your renegade crashes.

Ummm...Are you by any chance Exporting a mod Pkg or a Mix into you're data folder?

Lol and by the looks of it, you added presets. Remember you can't add presets you can only change existing ones. And do NOT export when making a serverside mod. Because when you save a mix to the Data folder, you copy over the existing one, which means you're level does not exist anymore and in alot of cases only building interiors will show up.

Replace all mix's in you're data folder with the original ones. Than when your finished a map. Save the lvl,lzd,lzd into you're data folder. That is all you need.

Replace all mix's in you're data folder with the original ones. Than when your finished a map. Save the lvl,lsl,ldd into you're data folder. That is all you need.  
Well I mean I have to teamp object-spawner to make the bot spawners for a co-op.....and this isnt a serverside mod like the objects.aow I am trying to make co-op mission maps for my server. I dont not export the file when I'm done i just save them in the data folder.

If what you're doing is not Serverside than you do export and can Temp. Although you could alter existing presets. But why would you run a server with something thats not Serverside.

[View Forum Message](#) <> [Reply to Message](#)

---

What im trying to do is kinda like your server. The same maps just co-op. I know how to save the

level files....I jus need to know how to stop them from crashing

[View Forum Message](#) <> [Reply to Message](#)

---

Well than it has to be serverside lol. Do everything i said in the befor post. When making bots, edit existing ones. Yuo cannot add presets .

you might want the script for automaticly placing everyone on a side when they join. I think whitedragon has it.

---

Does temping count as adding? Cause then how do i make them respawn? I dont really need to edit the presets bots cause they are already good enough for me.

---

---

Subject: Re: Co-op problem

Posted by [Kamuix](#) on Sun, 23 Apr 2006 21:43:12 GMT

[View Forum Message](#) <> [Reply to Message](#)

---

Yea it does. Temping allows you not to have to use the whole Presets.ddb. Because it takes up alot of space.

If you have chosen to use objects.ddb over aow. Than you have to start up you're server before you place the objects.ddb into your data folder. Than reset the map

[View Forum Message](#) <> [Reply to Message](#)

---

Why would you use .ddb instead of .aow? Sorry if this is a n00bish question, I just always thought that you used .aow for servers so you wouldn't get 0 bug and wierd stuff like that when you play on a server.

---

---

Incase you do not have the latest verson of SSAOW or incase you have started using a diffrent bhs.dll/scripts. Therefor objects.ddb would not work.

Ok now this is gettin me kinda angry cause i used the regular level edit terrain and i deleted all the nod spawners and made some gdi ones but then it like automatically makes a spawner but you fall through the ground.....maybe this is a lot to ask for but maybe could you make one that works for me and then i could use that as a model?

YEAH ALRIGHT I GOT MY M01 CO-OP TO WORK!!!!!! Thnaks for the help Kamuiz but I still

have a few problems. How do I get tank bots to work? And the bots I made are really stupid. They always run into stuff and aren't smart enough to get around or even shoot at you sometimes. Also, when I put a bot on a waypath, do I put them right on the starting green triangle or can it be like right next to it.

---

The vehicle spawners should work much like the soldiers. I would use JFW\_Base\_Defence for them. JFW\_Follow\_Waypoint.

I have always attached the soldiers directly to the waypath so I'm not sure whether or not it would work without them attached directly.
