Ok so I am running fine, but I decide it is time for a reinstall. I used remove programs, I deleted Renegade Folders, and all registry entrys. (renguard as well) I now have reinstalled, and install Renguard with CP2. I can launch Renegade and use XWIS perfectly, but when I try Gamespy, or Renconnect nothing happens when I click 'Renegade' nothing happens. When I try to launch game2 nothing happens, i have reinstalled twice since this first happened (both complete uninstalls and installs) but nothing seems to work.
