Hello everyone one that is reading this. I need a little help on my scripting. I have a certain type of scripts for my Windows FDS. The allow certain hidden commands for Renegade. They start in MIRC where i would type certain bot commands into Remote with a key so when i connect my NR bot to irc and my fds it would read those commands, then with the scripts they would turn you into that certain character. Like if i did !visceroid id get a visceroid in game and be able to move around with it and use its weapon. Then i could also make vehicles appear, al or drivable. So they have been working for about 4 years now since I started my server, But there's a lot of bugs in them that i cant seem to get out.. Plus they all happen randomly. My server now only can allow 2 people in because when more come there connection will break. Then sometimes my server will just freeze and the commands will not work. I have a felling it is my bot (NR 3.00c beta) because soon as i reset it. The commands will work again. But still its breaking players connections. Its really sad to only have 2 people in your server So does anyone have any ideas? If u do please reply back. If you can fix this in a second IM me. (aim kylecchh) (msn kylecarabetta@comcast.net)
