I've got a few problems with renegade. the first is that whenever i start RenX/Gmax these 2 warning boxes appear about 20 times each.

The next problem is that, i just bought tbsun/firestorm a couple of weeks ago. When i installed it, it asked me if i wanted to install WOL, i did and now i cant play renegade online. Renegade keeps asking me to install a newer version of WOL.

Can anyone help me?

Insert Renegade CD1, run setup.exe on the CD, chose to install WOL only. Ta-daaa!

Can't help with the other bit I'm afraid.

You can download it using bit torrent, that's what I did.
