Does anyone know where a step by step guide to making a renegade server might be? Im pretty sure i have all the files, just one problem, when i run the renguard SSC it opens a black screen sits for 10 seconds, flashes writing then closes. Im pretty sure thats not supposed to happen. Can anyone help me?

i have given up posting when there is not enough detail...

we need screenshots, what it says, version of windows etc

instead of trying to run the ssc on its own, why not install BRenBot (www.brenbot.com) which comes with renguard built in.

Alternatively you could try NR, afaik that also has renguard support

www.NightRegulator.co.uk, and dont bother with the SSC, it only has full RG and is extremely limited to how it can run

KillerCarrot:

I have a document that I am in the process of finishing.
It is written towards the Windows version of the FDS NOT the Linux version.
It includes preparation, installing, patching and SSAOW.
It is 90% completed, and should have it completed later this evening.
PM me here in the forums with your email address or IM.
I will send it to you.

Tony
