hey guyz n galz ... i have the following problem:

always if i try to start renegade with one of your scripts (version 2.1 and higher) i get this error

the scripts 2.01 and lower are working as far as i tested, but it would be good if i could use the new versions ...
specialy cuz i want to use the custom key binding stuff

i am using win xp prof (x64), all updates, latest drivers

This might seem stupid, but did you cope scripts.dll AND bhs.dll to the renegade directory?

yes did ...
also tryed to mix different versions ... doesnt work, many windows errors poping up then

Try re-copying bhs.dll and scripts.dll. (something may have been corrupted which caused
LoadLibrary to reject bhs.dll).

already did redownload multiple versions ... did copy many of them more than one time ...

like i said above ... version 2.01 (and lower) are working fine, version 2.1 (and higher) giving out the error

well ... after i uninstalled and reinstalled renegade anything works fine ...
heaven knows why ...
