Ok, here goes.

I didnt even know about this sbbo thing but apparently im using it. every server i go to the host tells me i am typing sbbo, but im not! i dont know what it is or what it does, and i am NOT typing it.

Can anyone help me? I dont know how to fix it and i keep getting booted because of it.

(some more information-I am not typing it, however i was told you must hit F8 and then type it. I am not sure what it does. I have dialup. I have microsoft AVG and anti-spyware, so i do not have any viruses. The only thing with F8 i know to do is FPS, which mine is 75. I do not know what or how the servers show i am typing it, but while i am talking to the hosts they tell me it shows that i am typing it. --hope that info helps some--)

I told Gunshot to come to here and ask for help because he got banned from [NE]WarZone because of it then I noticed he came into RenStation (my server) and I was getting the alert message

[16:56] <@WarBot> (3)gunshot08 banned by [NE]vasatron1[RCT]@IRC on 31.05.2006 14:57:00 for SBBO Exploit after warning given (gunshot08)

([16:25] <@Fastc0nn1Bot> 3[ALERT] 16 gunshot08 attempted to use the BW exploit. Their BW has been reset to the default.)

He swore he never typed it in, for some reason I belive him as just before that message he typed something in main chat.. so the time diffrence is rather high. Meaning after 0.5 sec I got that message.

I believe the problem lays within his connection being dialup..
Could someone give their opinion on this subjet please?

This is what happens when the bandwidth minimum in SSAOW.ini is set too high. Lowering the minimum bandwidth to about 30-40 kbps should do the trick.

I left the BW at default (56000(56k)) I dont see why it needs to be any lower then that.

Ok. So how do i lower it? Im not the best when it comes to this so list specifics please.

(And Thanks)

(And Thanks)

That's a setting that is changed on the server.

caveman wrote on Fri, 02 June 2006 12:46I left the BW at default (56000(56k)) I dont see why it needs to be any lower then that.
A '56k' modem can only provide 30-40kbps of downstream bandwidth.

A '56k' modem can only provide 30-40kbps of downstream bandwidth.

Im on a 56k modem at the moment and I can download data at around 5-6KB/s and my max kbps on renegade goes to about 70 so I dont see a problem with it but if I have to i'll lower the rate to 33600-45000 I dont love the idea of someone having that low kbps.

Our server for exemple asks a minimum BW of 105000. You only have 56k, so your BW will be set to the minimum of 105000 automatically. You will probably lag out then.

56k - players are always very laggy, especially on big servers. We don't want them, sorry. Stick to small servers which will not have this option enabled. The more players, the more bandwidth you need .

Geeze you guys really know how to make someone with a crappy connection feel great.

Although dial-up is all we can get out here, our "56k" connection usually runs about 44kbps.

Merovingian wrote on Fri, 02 June 2006 19:08if i get high ping i usually press f8 and type "sbbo 1500500" and it sorts it. some servers tell you to do this but this is to my knowlage...

Yes but that only works if you can actually take in that much bandwith, so you need broadband.

Meroving, please think of the other players. When you play with your 56K on a big server, you warp from one place to another on their screens. You yourself must have pings of 300-400.

I understand you just want to play the game but I can really only advice you to play in smaller games.
