Hay all,

Im very much new to renegade (noob i am), i was recomended this game from another gamer i know from the game MOHAA.

To start: I have a problem with renguard, when i normally load the game (By clicking on the icon on my desltop) or trying to connect a server through "The All Seeing Eye" renguard loads, and then another window opens with-in renguard. This sais "Failed to recieve list of master servers. Check your internet connection". Yes my internet works, ive tried that lol, i dont use windows firewall so it isnt that, i have zone alarm firewall but i have the trial and its run out, run out before i installed renguard or renegade so im stuck as to what it could be any ideas?

Thank You for ANY help!

WILLIS

Uninstall zonealarm and reinstall the free edition of it or don't use a firewall, then try.
