Hey out there you Renegade-type people. I thought maybe you'd like a little update on our progress. We're currently working on the Gap Generator effect. You can go to our thread on the RA:APB forums to see just what kind of wackiness we're up to. The latest screenshots and media are located here. It's pretty cool, and a lot of you probably don't think what we're doing is even possible in Renegade. Guess what? It is.

Oh yes, how could we possibly think that scriptzones that enable fog could exist! Oh magical man, please show us what else you can do with your fire stick and cloacking enabled on a model.

The V2 should of been using the model replace since day one.

oh and Gif Video = No

Wow, I'm loving what you guys are coming up with so far! Especially with the new gap effect. If Neo could add sparks/lightning above the gap generator like in the old RA manual...

What's the hit performance wise? Will the fog clear (at least for other Soviet units) when a unit is within the radius?

And why the hate? It's just supposed to be an update. No need to troll Oblivion. That fog doesn't look like the fog I've seen in Renegade before.

[View Forum Message](#) <> [Reply to Message](#)

I have a bad computer, so I'm not really qualified to say how the performance is. It doesn't seem to run any worse than that map normally does for me.

As for your other question, the fog doesn't clear up until the Gap Generator is destroyed. It also cloaks Allied units so that they are only visible when they fire, similarly to Red Alert.

Posted by [YSLMuffins](#) on Mon, 26 Jun 2006 19:35:13 GMT

[View Forum Message](#) <> [Reply to Message](#)

Would it be possible for the fog to clear just around the tank so that other (friendly Soviet) units can see the tank? Like it worked in RA.

A fog effect in a central area? How was that impossible? You could do that with emitters if you had to.

As for speed, who cares, the mod is out there and its being worked on.

I'm running everything on full, with 4xAA and 16xAF using RenD3D9. I also have some other settings turned on to increase image quality via the nvidia drivers(7900GT). So keep that in mind when judging the FPS.

If you think scriptzones can have a spherical area of effect that moves with a vehicle, go ahead and try.

You dont make it spherical, you use aliased script zones to create the effect.

Move your box out a distance, create an axis point of zero on your proxy box, and just 360 clones all around, done. It doesnt require "brining down" the walls of basic renegade modding.

I don't think you get it. The mobile version of the effect has it centered around a vehicle that moves. And this effect is much nicer and runs better than that 'billions of emitters' idea you seem to think is so great.

oh and Gif Video = No

While I'm sure you're the king of Renegade modding and can make moving script zones and adjust the fog in real-time before that feature is even in the engine or scripts.dll or bhs.dll addons, let me tell you that-- well you can't. Sorry.

Unless the whole part about hacking in the adjustable fog was all in my imagination

Also, yeah, Gif Video might load slow if you're on a 28.8k line.

I find this fascinating. I don't think we need to spend time arguing what is or isn't possible or how the effect is accomplished, but how it's going to affect gameplay.

How/will the gap obscure targeting? It seems like the gap is going to be much more powerful and useful than it was in RA.

Subject: Re: Red Alert: A Path Beyond Update: Gap Generator + Special Effects
Posted by [PointlessAmbler](#) on Tue, 27 Jun 2006 22:20:09 GMT

[View Forum Message](#) <> [Reply to Message](#)

So far targeting is left unhindered, but Allied units are cloaked when not firing. Buildings are unaffected, so it's certainly possible to rush the enemy Gap Generator and destroy it before it becomes a real problem.

jonwil wrote on Tue, 27 June 2006 08:26l can tell you now that moving script zones are NOT possible on the renegade engine without a LOT of work.

Pffft, you're just JONWIL. This is Oblivion, High Lord of Modding we're talking about here. With a flick of his hand he has the source code appear in front of him, and with a wave of his magnificent cock he breaks the laws of physics.

Who are YOU to tell him that he can't do something? You're ONLY one of the most prolific Renegade hax0rs around. Seriously Jonwil, give it up; THIS guy's the real thing.

Muffins, the gap is a serious bitch. Allies have perfectly clear sight, other than a call we made to not make the sphere itself invisible to the Allies (this way they know their range, and it's seriously kinda imposing/cool to see). The range is pretty good, and as far as the stationary generator is concerned, we're talking pure potential.

It's a counter for the Tesla Coil, and in the FPS it fulfills this role a lot better than you'd expect. While it can't do damage by itself, it makes targetting anything but the buildings a pain in the ass. In a larger base with strewn-out landmarks you could probably get lost. But even while it does no damage on its own, it gives the defenders a huge boost. Essentially every weapon can fire beyond the visual range of those in the blinding range, so even a technician could give a Soviet soldier a hard time. The mobile version is a bitch on wheels.

[View Forum Message](#) <> [Reply to Message](#)

Ah welp that is a different story, i thought this gap generator was a building not a moving object. So there you go, alot different than what i remember from Ra; the spinning fork tower.

EDIT:

Chrono, no need to be sarcastic here, I do my best for this community and frankly I get tired of the ack mentality of im this and that and no one else can match it.

As for Jonwil, ive worked with him before and like his company.

I just found what I was looking for (specifically some stuff related to the way the game stores the position/size/transform of a script zone, something called an OBBoxClass comes into it) and I can now make new script zones at runtime. They will require network send (to set the size) but they will work.

They will (along with as much of the other stuff as I can add) go into 2.9 I expect.
