When i try joining a server....
it's joining and i see all players and so on..
but when i press start and it comes to "Negotiating ports with server" it fails... why?
is there a game port i missed or a specific server port for each server??

Each server usually does use a different port, but that shouldn't matter. As long as game2.exe has full access to the internet through your firewall, any connection stemming from that should be allowed automatically.

Is it with all servers you try to join?

it looks like this..

that's my prob.. it always does like that...
and i think there is a missing port and these are the ports i'm using:

TCP 7000,3840,4005,4808,4810,4010,4848,6667,9999
UDP 1234,1235,1236,1237

already read that part.. didn't work...

oh... can't you just write up all ports u are using for multiplayer at ren.. easier way...

Hmmmm each server can define their own port they use for players to connect to them. Could that influence this (I'm not an expert)?

That screen shot is obviously for my server (n00bstories). You need port 6978 open to connect to it.

but isn't there a way to make like port 1234 go through 4321 or something cuz moobstories is full...

or maybe u can say the most recent port that servers uses

Please don't tripple post.

As for your problem, I
don't think it has much
to do with negotiating
ports.

What firewall do you use anyway by the way?
