like the others, i installed renguard because its not possible to get into a server without being kicked out. after installing it, i was asked to download two maps and then to download a second core patch. okay, done. but now everytime i try to enter a server, i get "game play pending" on EVERY server. no matter how long i wait, it is still pending. after i exit, all sounds stop. all of them. ten minutes before, when renguard wasnt installed, renegade ran flawless. i remember installing renguard a while ago without problems. i lost the renegade cd, so i didnt have a chance to play it again until now. and, now, renguard has screwed me instead of helped me. i dont understand. what heppened to the old renguard that actually worked for me?

Do you have a firewall? It must allow game.exe and game2.exe

Try going into RenGuard's options and disabling the RenGuard sounds.

sounds? having to do with a connection?  
who cares, it worked!  
thanks!
