Here my story:

When I start up renguard I first get Trying to connect, then secure link, then Welcome to launch.. Etc, then to launch click renegade etc, BUT then I get instead of nothing and just started renegade: There are errors! Disconnecting, disconnected from renguard network..

I have no idea what to do, normally I had never problems with it, already tried to reinstall.. But that doesnt work  
So can some1 help me plz?

Ty already, Kurry

Btw: when I got disconnected from renguard network I can click on renegade and then it just starts up normal, only WITHOUT renguard

Wait a while before clicking on Renegade. If you click on Renegade before RG finishes all it's scans it causes problems.

A good guide is to wait until it shows the webpage in the top part of the window, that usually appears about the time it's finished scanning. Alternativly go to Options and tick automatically start Renegade (or something like that), and it will start Renegade as soon as it's ready for it.

does it say what file caused an error or anything? The only reason for it to disconnect normally is if it scanned something and decided it something which is not allowed...

Check you're internet connection, or let game.exe and game2.exe through your firewall.

You can disable CorePatches through the options screen.

Or you can complain to jonwil about how his CorePatch 2 installer sucks.
