Brenbot seems to be crashing every hour. Does anyone know why this is happening?  
Everything is properly configured, IRC and Remote Admin...

Thanks

Brenbot wont run in Command Prompt.

Edit, Nevermind. It's running in Command Prompt, Will post error when it crashes.

Undefined subroutine &brIRC::match\_player called at brIRC.pm line 130.

I noticed that when you auth'd, But I dont think that is the problem. I believe something else is crashing it.

Here's the problem that is killing BrenBot.  
Undefined subroutine &main::get\_date\_time called at script/brenbot.pl line 68.

thats an.... interesting... error. Have you tried re-downloading the brenbot.exe file? perhaps it has become corrupted somehow....

What it's saying is it can't find one of it's subroutines, which is wierd as if there was a missing subroutine there would be a lot of people flocking here with the same problem.

I've re-downloaded it AND reinstalled it several times.

I was wondering about this when I started BrenBot  
server: error 11004 creating socket: unknown error

Maybe this is a new bug?
